**OBSERVATIONS:**

No flies were observed while on the exterior of the ranch, inside of the ranch there were minimal flies that were primarily around a bucket of broken eggs. Bucket of broken eggs was not covered and there were approximately 6 dead chickens that needed to be properly disposed of. The ranch had an abundance of feathers around the coops. I observed the small pile of sheet metal remains and should be cleared from the premise. I viewed two dead rodents on the property, fly strips and bait stations needed to be replaced. A leak was observed coming from an irrigation pipe and repair required. The ranch has an excessive amount of overgrown vegetation.

**RECOMMENDATIONS:**

Broken eggs and dead chickens must be in a sealed container and removed every 72 hours. Remove the excessive feathers, building material and the excessive vegetation on the ranch and in the public right-of-way. Repair the leak coming from the irrigation pipe. I spoke with the manager who advised the bait stations are changed on Mondays, Wednesdays and Fridays. They would be changed out as soon as possible. I also advised the manager of the dead rodents observed and explained the overgrown vegetation and removal of the building material.

**ACTION TAKEN:**

Verbal advisal given to management who advised corrections would be made within 24 hours.

Biosecurity Measures Taken                      Yes   X   No
