| Larva breeding on the ranch | X | | | |
| Emergency activities need to be implemented | | YES | NO | X |

| | | | |
|-------------------------------|-----|---|----|
| RANCH IS IN COMPLIANCE | YES | X | NO |
|-------------------------------|-----|---|----|

OBSERVATIONS:

No fly population was observed. Several different areas under the coops were inspected and larvae were not observed. Owner was advised to rake again around all uprights on east side of coops on a weekly basis to ensure more thorough removal of manure. Minimal broken eggs were noted under coops. 3 large leaks were noted under coop 3 that still needed to be repaired and numerous leaks under coop 6 were also noted which needed IMMEDIATE attention. Manure will be picked up this evening (Tuesday), Thursday, and Saturday. Fly traps okay. Vegetation (due to lots of rain the last couple of weeks) needs to be abated down to 4 inches height and maintained at all times.

RECOMMENDATIONS:

Maintain removal of chicken manure per the Manure Management Plan requirements including raking around the posts of the coops to allow for more thorough abatement on a weekly basis. Repair all leaks in pipes and cups before next inspection.

ACTION TAKEN:

Next inspection scheduled for Tuesday, April 3, 2018.

Biosecurity Measures Taken Yes x No

Inspected By: P. Swantek
