Larva breeding on the ranch		X		
Emergency activities need to be implemented		YES	NO	X

RANCH IS IN COMPLIANCE	YES	X	NO
------------------------	-----	---	----

OBSERVATIONS:

Fly population is down from last inspection. Several areas under the coops were inspected and numerous larvae were observed on the ground below houses 3, 15 and 20. Manure will be picked up tomorrow and disposed of and all areas will be sprayed. Fly traps were rejuvenated on Monday and Saturday. Remainder of coops need to have dirt placed over manure **before** next inspection in two weeks. There were quite a few small and large leaks that will be abated immediately (no larvae noted in soil below leaks). Vegetation between coops is exceeding the 4 inch height requirement. Several dead chickens were discovered and there were eggs on ground that need to be removed.

RECOMMENDATIONS:

Complete the process of adding fresh dirt below remaining coops to bring up height of dirt level with the concrete to make it easier for the collection of manure by equipment, mow vegetation to no higher than 4 inches, and clear any broken eggs from around/below coops **before** inspection scheduled for **Tuesday, December 12, 2017**. Remove chicken manure per the Manure Management Plan requirements. Continue with the spraying 2-3 times a week.

ACTION TAKEN:

Next inspection scheduled for Tuesday, December 12, 2017.

Biosecurity Measures Taken Yes x No

Inspected By: P. Swantek
