Larva breeding on the ranch		X		
Emergency activities need to be implemented		YES	NO	X

RANCH IS IN COMPLIANCE	YES X	NO
-------------------------------	-------	----

OBSERVATIONS:

Fania flies were minimal. Many sites (under coops) were inspected for evidence of larvae.

Mature larvae casings were found in a small pile of manure in the first coop where there was a leak and manure was removed. In the coop with the dirt floor, compacted manure was inspected in a couple of the damp sections and a small amount of larvae was noted. All coops were treated with insecticide (spray) on Tuesday, September 11th, and Friday, September 14th, 2018 of last week. Fly traps were rejuvenated on Tuesday, September 11th, and again on Friday, September 14th, 2018.

There were only a couple of leaks noted that will be repaired today. Feathers were noted between the coops and in free range area that need be abated again. Chickens are molting quickly. Only a few chicken parts were discovered during the inspection and were removed immediately for disposal.

RECOMMENDATIONS:

- Maintain removal of chicken manure per the Manure Management Plan requirements (logs sent to City every Monday).

ACTION TAKEN:

Next on-site inspection scheduled for **Tuesday, September 25, 2018.**

Biosecurity Measures Taken Yes x No

Inspected By: P.Swantek
