Larva breeding on the ranch		X		
Emergency activities need to be implemented		YES	NO	X

RANCH IS IN COMPLIANCE	YES	X	NO
-------------------------------	-----	---	----

OBSERVATIONS:

Fania flies were minimal again. Many sites (under coops) were inspected for evidence of larvae.

In the coop with the dirt floor, compacted manure was inspected in a couple of the damp sections and a small amount of larvae in one wet portion was noted. All coops were treated with insecticide (spray) on Monday, September 17th, Thursday, September 20, 2018, and Friday, September 21, 2018 (Triazicide) of last week. Fly traps were rejuvenated on Tuesday, September 18th, 2018.

There were many leaks in both the cups and in some of the water lines that will be repaired today. Feathers were noted between the coops and in free range area that need be abated again. Chickens are still molting. No chicken parts were discovered during the inspection.

RECOMMENDATIONS:

- Maintain removal of chicken manure per the Manure Management Plan requirements (logs sent to City every Monday).
- Repair all leaks in the water lines and in the cups.
- Clean up excessive spilled feed at end of several of the coops.

ACTION TAKEN:

Next on-site inspection scheduled for **Tuesday, October 2, 2018.**

Biosecurity Measures Taken Yes x No
