### **OBSERVATIONS:**

Fania flies were observed in coops 5 thru 7 again. Many sites (under all coops) were inspected for evidence of larvae.

In coop #4 (with the dirt floor), compacted manure was inspected in a couple of areas and in only one location were larvae discovered. All coops were treated with insecticide (spray) on Monday, October 29th, and Thursday, November 1st, 2018, and Friday, November 2nd, 2018 (Triazicide) of last week. Fly traps were rejuvenated on Tuesday, October 30th, 2018.

Spilled feed (between and below) and some compacted manure (below) below coops 5-7 is still an issue that needs to be remedied (found no larvae in any spilled feed). Owner has been told to sweep up the feed and scrape the compacted manure before next inspection.

Broken eggs in the free range chicken area need to be removed.

There were very few leaks that were repaired immediately.

### **RECOMMENDATIONS:**

- Maintain removal of chicken manure per the Manure Management Plan requirements (logs faxed to the City every Monday).
- Clean up excessive spilled feed between and under the coops. Remove compacted manure (hand scrape with scraper if necessary) under all of the concrete coops before next inspection.
- Remove all broken eggs from free range chicken enclosure/area.

### **ACTION TAKEN:**

Next on-site inspection scheduled for **Tuesday, November 13, 2018.**
